

Quiet power, big results.

This is electric simplicity at its best. Switch on, take off and glide away like you've just muted the world.

Every part is tuned for peace of mind; from the silent thrust to the low-maintenance design that makes "check-up day" a non-event.

Quiet enough to sneak up on the uncatchable. With power this smooth and silence this complete, you're not chasing the fish, you're surprising them.

- Sleek design

Small size, loud silence.

Tough, tidy and refreshingly uncomplicated. It runs clean, carries light and gets you moving in seconds. No fumes, no fuss, just smooth electric power that lets the world slow down to your speed.

Designed for quick starts and quiet moments, it fits easily, grips comfortably and handles like it's been reading your mind. And with Yamaha's proven 12-volt setup, you'll get all the punch without the noise.

Built strong, balanced and brilliantly resistant to the knocks of daily use, it's the kind of motor that earns its keep by never asking for attention.

Smooth, cool and quiet power

Stays cool under pressure. Oversized windings and commutators draw heat away for longer battery life, while the unique bearing system keeps friction low and noise even lower. Glide through the water in near silence; the fish will never know you're coming.

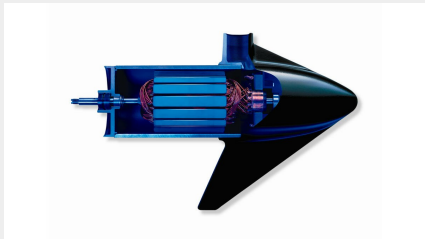

Indestructible composite shaft

Stronger than steel and built to flex on impact, the ultra-tough composite shaft won't kink, rust, or corrode. It takes the hit, then springs back to form, ready for whatever comes next.

Power props

Cut through heavy vegetation and stubborn water resistance with the high-thrust power prop. It's designed to deliver extra push exactly when you need it, keeping your boat moving smoothly through the thick of it.

A really tough little power partner

Don't let its size fool you. This motor is built to take on the elements, with a near-indestructible composite shaft, a durable 12-volt motor, and a weed-resistant prop that just keeps pushing. From calm coves to choppy shallows, it goes where you go without a whisper of complaint.

Electric-Drive Technical specs	
Amp draw	30
Control	Telescoping Tiller
Battery meter	No
Digital maximizer	No
Maximum thrust (kg)	13.6
Voltage	12
Shaft length	762 mm
Mount feature	Lever lock
Speeds (FWD/REV)	5 FWD/3 REV
