

Land the big one.

It's Yamaha's idea of a mic drop — one that barely makes a sound. The control is instant, the power is effortless and the results speak for themselves.

Smooth, responsive and impossibly composed, it handles like it knows what you're thinking. You don't steer it; you collaborate.

Silent, steady and leaving you feeling just a little smug about it, this is the motor that proves dominance doesn't need a soundtrack. The fish never stood a chance.

- Sleek design

Stalk like a cat.

Every feature is designed to deliver the moment that matters, when the line goes tight and the smile spreads across your face. One-hand stow for fast moves, quick-lock depth adjustment for easy fine-tuning and steering tension control that keeps your handling smooth when the water isn't.

Power comes on clean and quiet, turning long days into longer stories. It's efficiency you can feel, durability you can trust and silence so complete you might actually hear the fish change their minds.

When you reach back for your transom-mount motor, you need instant responsiveness, easy control, unyielding toughness and a reliable motor that you can count on for years. The M32 is exactly what you will get.

One-hand stow

With a simple pull, lift or lower the motor into any of ten precise positions using the easy-access thumb release. One smooth action, total control, and no awkward juggling when it's time to move.

Twist-on hand control

Enjoy total control with the Tilt/Extend Tiller handle on the M26. It tilts up to 45° and extends up to 15 cm, so you can adjust your position and steering style with ease. The contoured grip feels natural in your hand, keeping comfort and precision perfectly in tune all day long.

Quick lock cam depth adjuster

Set your depth quickly and securely with the quick lock cam depth adjuster. One smooth motion locks your prop exactly where you want it, so you can stay focused on the water, not the hardware.

Versatile steering tension control

Fine-tune your steering feel with the adjustable collar above the engine mount. Keep it loose for light, effortless turns or tighten it for more stability in rough conditions. It's responsive when you need freedom and steady when you need focus.

Electric-Drive Technical specs	
Amp draw	42
Control	Tilt/Extend Tiller
Battery meter	Yes
Digital maximizer	Yes
Maximum thrust (kg)	31.8
Voltage	24
Shaft length	1067 mm
Mount feature	One-hand Stow
Speeds (FWD/REV)	Variable
